Beschreibung und Anwendungen

The digital pyrometers PYROSPOT DT 47L are especially designed for industrial use. They are suitable for temperature measurements from -40 °C to 1000 °C on various non-metallic or coated metallic surfaces.

The solid construction in a compact IP65 stainless steel housing ensures use even under harsh environmental conditions.

With a response time of only 10 ms (t_{90}), these pyrometers are also suitable for fast measurements. Different optics variants realize measuring fields from 1.7 mm diameter.

The optional integrated LED pilot light allows the exact alignment of the pyrometer to the measuring object. Even at high temperatures, the pilot light can be seen very clearly.

The devices are equipped with an Ethernet interface, which allows data transfer to local networks. Via an integrated web server or the Modbus-TCP protocol, the parameters can be optimally adapted to the application.

The temperature linear standard output signal of 0/4 to 20 mA allows easy implementation into existing measurement and control systems.

Also for parameterization and measured value recording the comprehensive parameterization and evaluation software PYROSOFT Spot can be used.

Typical applications of the pyrometers are:

- Food
- Construction materials
- Paper and packaging
- Plastics
- Ceramics
